

Audience Response System

Creating a Session

and talk free :)

Split up into smaller chunks. Too much text for a poster.

https://github.com/leafcathead/CTS5_AudienceResponse

Vision:

The unique thing about our ARS is that it stores no user information, making it deal for those afraid of data breaches or afraid of companies selling their data. This makes all our application light weight since there is little authentication causing everything to be faster.

Development Technologies

Development Tools

Process Model :

Could you find some transparent logos?

Version control :

Conferencing :

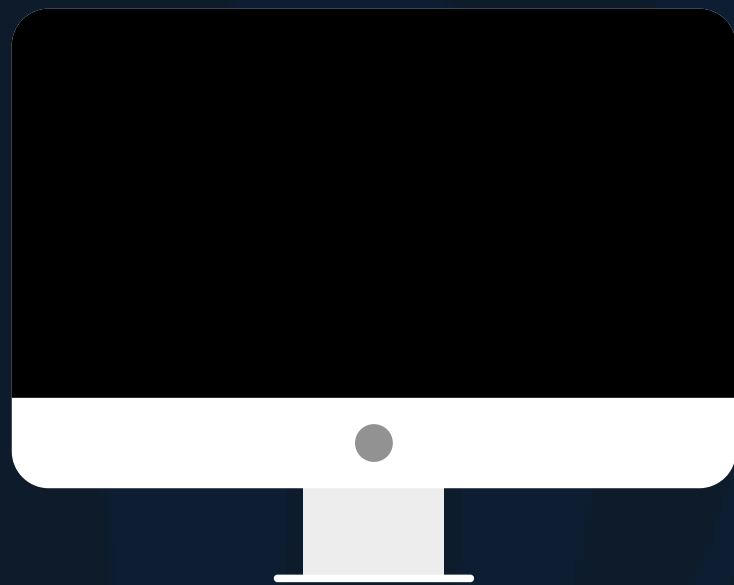

Same issue with too much text as above.

Too much white space, fill this area

Software Architecture:

Our architecture relies on a mix of RESTFUL API and Websockets using SpringBoot, SockJs and Stomp. We used Microsoft SQL Server for our Database architecture to take advantage of MS-SQL's strong efficient stored procedures.

Features:

Why so many phones? What is supposed to be here?

Too much white space. Fill it
